Inoyag Mamaroba Matuan

Inoyag Mamaroba Matuan, PhD (born June 19, 1958) is a retired Filipino hydroelectric engineer and plant manager who dedicated over four decades to the National Power Corporation's Agus 2 Hydroelectric Plant in Lanao del Sur. A Maranao professional from the Bangsamoro region, Dr. Matuan rose through the ranks from Control Operator to Plant Operations and Maintenance Manager, becoming one of the most accomplished technical leaders in Mindanao's energy sector. His career is distinguished by pioneering work in computerizing operations reporting, spearheading multiple ISO certifications, and achieving consecutive Outstanding Ratings in plant performance audits—cementing his legacy as a transformative figure in Philippine hydroelectric power generation.

Inoyag Mamaroba Matuan

Born	June 19, 1958 Buntong, Lanao del Sur, Philippines
Nationality	Filipino
Occupation	Hydroelectric Engineer, Plant Manager (Retired)
Education	BS Mechanical Engineering (MSU, 1980) BS Electrical Engineering (MSU, 1986) Master in Management (Liceo de Cagayan, 2001) Doctor in Management (Liceo de Cagayan, 2004)
Spouse	Saripha Hadji Ali Matuan
Children	12
Known for	Four-decade career at National Power Corporation ISO Certification Leadership Plant Performance Excellence

Early Life and Background

Inoyag Mamaroba Matuan was born on June 19, 1958, in Buntong, Lanao del Sur, in the heart of the Bangsamoro region. He comes from a Maranao family—his father, Panda Matuan Mamko, and his mother, Mamaroba Kakasi Macalimpao, raised him with values that would later define his professional integrity and community commitment. Growing up in a predominantly Muslim province, Matuan witnessed firsthand the challenges and opportunities facing Mindanao's development, particularly in infrastructure and energy access.

He completed his elementary education at Marinaut Elementary School from 1966 to 1968, then moved to Dansalan College High School for his secondary education, graduating in 1972. These formative years in Lanao del Sur's educational institutions shaped his understanding of the region's needs and potential, particularly in technical fields that could drive economic progress.

Matuan married Saripha Hadji Ali Matuan, and together they raised twelve children: Nasibah, Mohammad Sadiq, Asiya, Mohammad Jamshyd, Mohammad Jamal, Jamilah, Norjannah, Norhidayah, Mohammad Jarir, Mohammad Jamil Yahya, Mohammad Jalal, Mohammad Jabir, and Jora'nah. His ability to balance a demanding career in hydroelectric plant operations with family responsibilities reflects the strong support system that sustained him throughout his professional journey.

Education

Dr. Matuan's educational trajectory demonstrates a rare commitment to continuous learning across multiple engineering disciplines and management fields. He pursued dual undergraduate degrees at Mindanao State University (MSU), earning a Bachelor of Science in Mechanical Engineering in 1980 and a Bachelor of Science in Electrical Engineering in 1986. This dual expertise in both mechanical and electrical systems would prove invaluable in understanding the complex interplay of turbines, generators, and control systems at hydroelectric plants.

Beyond his engineering foundation, Matuan recognized the importance of management competencies for leadership roles. He enrolled at Liceo de Cagayan University in Cagayan de Oro City, completing a Master in Management with a major in Business Management in 2001. Not content with a master's degree, he continued his studies and earned a Doctor in Management from the same institution in 2004, becoming one of the few engineers in the Philippine power sector to hold both technical engineering credentials and advanced management qualifications.

In 1984, Matuan also completed a vocational course in Basic Computer Programming at Computrade in Iligan City—a forward-thinking decision that would later enable him to computerize critical plant operations and reporting systems.

Professional Credentials

Dr. Matuan holds an impressive array of professional licenses and eligibilities that underscore his technical mastery:

Registered Mechanical Engineer – He passed the board examination on April 1, 1981, with a rating of 77.35%, receiving Professional Regulation Commission (PRC) License No. 21339.

Registered Electrical Engineer – He obtained his electrical engineering license on October 1, 1987, with a rating of 75.20% and PRC License No. 0017514.

Professional Mechanical Engineer – On April 1, 1989, he earned the Professional Mechanical Engineer designation with a rating of 76.37% and License No. 0002888, demonstrating advanced competency in his field.

Career Executive Service Eligibility – On June 25, 2006, he received Career Executive Service Eligibility (CESB Resolution No. 6074, Series of 2008) in Cagayan de Oro City with a score of 109, qualifying him for top-level executive positions in the Philippine government.

This combination of dual engineering licenses, professional certifications, and executive eligibility positioned Matuan as one of the most credentialed technical leaders in the National Power Corporation system.

Career at National Power Corporation

Dr. Matuan spent his entire professional career at the Agus 1 & 2 Hydroelectric Plant Complex of the National Power Corporation (NPC) in Pawak, Saguiaran, Lanao del Sur. His 42-year tenure from 1981 to 2023 represents one of the longest and most distinguished careers in Philippine hydroelectric operations.

Control Operator (1981–1984)

Matuan began his career on December 21, 1981, as a Control Operator B at Agus 2 Hydroelectric Plant, reporting to Ramon F. Ko. In this foundational role, he was responsible for the hourly recording of meter and gauge readings from the plant's three generating units and their auxiliaries. Even at this entry level, Matuan demonstrated innovation by converting the elevation chart into a working table for computing water stored in the forebay elevation and calculating spilled water—an achievement that improved operational efficiency and data accuracy.

Acting Hydro Control Engineer (1984–1985)

On October 16, 1984, Matuan was promoted to Acting Hydro Control Engineer A, a role he held until August 29, 1985. Under the supervision of Pedro C. Ambos, Jr., he took on greater analytical responsibilities, including the analysis of hourly recorded readings and making recommendations to the Plant Hydroelectric Operations Engineer. He contributed to the preparation and submission of the Plant Statistical Report to NPC Head Office in Manila, demonstrating his growing competence in technical reporting and plant performance documentation.

Control Engineer (1985–1988)

From August 30, 1985, to March 31, 1988, Matuan served as Control Engineer A. During this period, he contributed to the preparation of procedures for the Managed Maintenance Program for implementation, helping to systematize the plant's preventive maintenance protocols. His work ensured that the plant's equipment received timely and effective maintenance, reducing downtime and extending asset life.

Principal Engineer (1988–1991)

Matuan was promoted to Principal Engineer C on April 1, 1988, continuing in this position through June 30, 1989, and then again from July 1, 1989, to December 31, 1991. In this role, he was responsible for analyzing the hourly recorded readings of meters and gauges and making technical recommendations to the Plant Superintendent. He contributed significantly to the preparation of Preventive Maintenance Work Orders for implementation by operating and maintenance personnel across both Agus 1 and Agus 2 Hydroelectric Plants.

Operations/Maintenance Superintendent (1992–1993)

On January 1, 1992, Matuan advanced to the role of Operations/Maintenance Superintendent A, a position he held through December 31, 1993. This marked his transition into supervisory and managerial responsibilities, overseeing the overall operation of the plant's three generating units and their auxiliaries while reporting to the Manager of the Operations Division.

Superintendent (1994–2003)

Matuan served as Superintendent A from January 1, 1994, to July 15, 2001, and then as Superintendent from July 16, 2001, to February 28, 2003. During these years, he was responsible for the overall operation of the three generating units at Agus 2 Hydroelectric Plant, continuing to report to the Operations Division Manager, Dr. Mangurun T. Bautil.

During this period, Matuan achieved one of his most significant contributions to plant operations: the **computerization of the Monthly Operations Report**. This innovation minimized delays and reduced errors in submitted reports to NPC headquarters, improving data reliability and operational transparency. He also developed the **Superintendent's Patrol Checklist**, which served as a systematic guide during routine inspection tours, enhancing the consistency and thoroughness of plant monitoring.

A brief termination occurred from February 28 to March 2, 2003, after which he was reinstated and continued his service.

Plant Superintendent (2003–2013)

From March 3, 2003, to May 19, 2013, Matuan served as Plant Superintendent, reporting to Dr. Mangurun T. Bautil. In this role, he bore full responsibility for the overall operation of the plant's three generating units and their auxiliaries. His continued refinement of computerized operations reporting and the Superintendent's Patrol Checklist became standard operating procedures that improved plant efficiency and safety.

Division Manager, Plant Technical Services (2013–2018)

On May 20, 2013, Matuan was promoted to Division Manager for Plant Technical Services, a position he held until July 31, 2018. Reporting directly to Dr. Palawan A. Lomondaya, he managed Safety, Health, Environment, Information Systems, and Technical Services for the plant complex.

During this period, Dr. Matuan achieved remarkable institutional milestones:

He spearheaded the acquisition of **Integrated Management System (IMS) Certification** covering ISO 9001:2008 (Quality Management), ISO 14001:2004 (Environmental Management), and OHSAS 18001:2007 (Occupational Health and Safety). This certification demonstrated the plant's commitment to international standards in operations, safety, and environmental stewardship.

Under his leadership, the plant received the **Corporate Safety and Health Excellence Award** from the Department of Energy for **four consecutive years**, a testament to the robust safety culture he cultivated.

He also spearheaded the acquisition of the **Certificate of Completion** from the Energy Regulatory Commission for **four consecutive years**, ensuring regulatory compliance and operational excellence.

Acting Plant Operations and Maintenance Manager (2018–2019)

On August 1, 2018, Matuan was appointed Acting Plant Operations and Maintenance Manager for the Operations Division at Agus 2 Hydroelectric Plant, serving in this capacity until May 15, 2019. Reporting directly to the Plant Manager, Dr. Mangurun T. Bautil, he was responsible for the management of the overall operation and maintenance of the entire facility.

During this period, he spearheaded the transition to the latest versions of the Integrated Management System standards: **ISO 9001:2015, ISO 14001:2015, and OHSAS 18001:2007**, ensuring the plant remained current with evolving international best practices.

He also led the plant to achieve an **Outstanding Rating** in the Plant Performance Measurement Audit conducted by the Power Sector Assets and Liabilities Management Corporation (PSALM), Manila—one of the highest recognitions for operational excellence in the Philippine power sector.

Plant Operations and Maintenance Manager (2019–2023)

On May 16, 2019, Matuan was officially appointed as Plant Operations and Maintenance Manager, the culminating position of his distinguished career. He served in this role until his retirement on June 20, 2023, reporting to Dr. Mangurun T. Bautil and bearing ultimate responsibility for all operations and maintenance at Agus 2 Hydroelectric Plant.

In this final chapter of his career, Dr. Matuan continued to lead the plant to excellence. He maintained the certifications for ISO 9001:2015, ISO 14001:2015, and OHSAS 18001:2007, and sustained the plant's Outstanding Rating in PSALM audits. His tenure as Plant Manager represented the apex of a career built on technical mastery, management excellence, and unwavering commitment to service.

Institutional Contributions

Dr. Matuan's contributions to the National Power Corporation and the broader Philippine energy sector extend far beyond his operational responsibilities:

Computerization Pioneer – At a time when most plant operations relied on manual record-keeping, Matuan introduced computerized systems for the Monthly Operations Report, significantly reducing errors and delays. This innovation became a model for other NPC facilities and demonstrated how technology could enhance operational efficiency and data integrity.

ISO and Quality Management Leadership – His role in securing and maintaining multiple ISO certifications (9001, 14001, OHSAS 18001) across successive standard versions positioned Agus 2 as a benchmark for quality, environmental stewardship, and occupational health and safety in the Philippine power sector. These certifications required systemic changes in documentation, training, and continuous improvement processes, all of which Matuan championed and institutionalized.

Safety Culture Champion – The four consecutive Corporate Safety and Health Excellence Awards from the Department of Energy reflect not just compliance, but a deep-rooted safety culture that Matuan cultivated throughout the plant. His Superintendent's Patrol Checklist became an enduring tool for consistent safety monitoring and risk mitigation.

Regulatory Excellence – Achieving four consecutive Certificates of Completion from the Energy Regulatory Commission demonstrated Matuan's commitment to regulatory compliance and transparent governance—critical factors in maintaining public trust and operational legitimacy.

Operational Excellence – His consistent achievement of Outstanding Ratings in PSALM audits speaks to the high standards of plant performance, maintenance quality, and operational reliability that he maintained throughout his leadership.

Legacy and Recognition

Dr. Inoyag Mamaroba Matuan's legacy is multifaceted. As a Maranao professional, he exemplified how indigenous and Muslim Filipinos can achieve the highest levels of technical and managerial excellence in the Philippine civil service. His 42-year career at a single facility—rising from Control Operator to Plant Manager—demonstrates the rewards of sustained dedication, continuous learning, and institutional loyalty.

His work had tangible impacts on Mindanao's energy security. The Agus 2 Hydroelectric Plant, under his stewardship, consistently delivered reliable power to the Mindanao grid, supporting economic development, industrial growth, and the daily lives of millions of Filipinos. His commitment to safety meant that workers returned home safely, and his environmental stewardship ensured that operations were conducted responsibly.

For young engineers and professionals in Lanao del Sur and the broader Bangsamoro region, Dr. Matuan's career serves as proof that technical excellence and ethical leadership can thrive regardless of one's ethnic or regional background. He navigated a complex bureaucratic environment, led diverse teams, and achieved international standards of quality—all while remaining rooted in his Maranao identity and community.

His dual engineering degrees, advanced management qualifications, and Career Executive Service Eligibility make him one of the most credentialed professionals ever to serve at the Agus Hydroelectric Complex. His innovations in computerization, quality management, and safety protocols have become part of the institutional fabric of the National Power Corporation.

Challenges and Resilience

Dr. Matuan's career was not without challenges. The brief termination in early 2003—though quickly resolved—reflects the institutional and political complexities that government employees sometimes face. His resilience and reinstatement demonstrate both his value to the organization and his personal fortitude in navigating difficult circumstances.

Working in a hydroelectric facility in a region that has experienced social and political challenges required not only technical competence but also cultural sensitivity, community engagement, and an understanding of the broader socio-political context. Matuan's long tenure and the respect he commanded suggest that he successfully balanced these demands.

The transition through multiple ISO standard versions (from 2004/2007 standards to 2015 standards) also presented significant challenges, requiring retraining, documentation overhauls, and cultural shifts within the organization. Matuan's successful leadership through these transitions speaks to his adaptability and his ability to manage institutional change effectively.

Personal Life

Beyond his professional achievements, Dr. Matuan is a family man who raised twelve children with his wife, Saripha Hadji Ali Matuan. The children—Nasibah, Mohammad Sadiq, Asiya, Mohammad Jamshyd, Mohammad Jamal, Jamilah, Norjannah, Norhidayah, Mohammad Jarir, Mohammad Jamil Yahya, Mohammad Jalal, Mohammad Jabir, and Jora'nah—represent a legacy that extends beyond the professional realm.

He has maintained his residence at the Agus 2 HE Plant Compound in Pawak, Saguiaran, Lanao del Sur, living at the site he dedicated his life to managing. This proximity to his workplace reflects a deep commitment to his responsibilities and a life fully integrated with his professional mission.

Retirement

Dr. Matuan retired on June 20, 2023, after 42 years of exemplary service to the National Power Corporation and the Filipino people. His retirement marked the end of an era at Agus 2 Hydroelectric Plant, where his institutional knowledge, technical expertise, and leadership had shaped operations for over four decades.

In retirement, he leaves behind systems, protocols, and a culture of excellence that will continue to benefit the plant and its employees for years to come. His career stands as a testament to what can be achieved through dedication, continuous learning, ethical leadership, and a commitment to public service.
